SECTION 7: Handling and storage		
7.1 Precautions for safe handling	Ensure sufficient air exchange and/or extraction in the work area Air extraction is required for spray application. For solid products: Avoid dust formation and dust deposits. Air limit values mentioned in section 8 must be monitored. At workplaces where isocyanate aerosols and/or vapours ca occur in higher concentrations, targeted air extraction must b used to prevent the occupational hygiene limit value from bein exceeded. The air must be moved away from people. For products containing solvents: Explosion protection required. The personal protective measures described in section 8 must b observed. The protective measures required when handlin isocyanates must be observed. Avoid contact with skin and eye and inhalation of vapours.	
Information about protection against explosions and fires:	Keep away from food and beverages. Wash hands before bread and at the end of work and apply skin protection ointment. Sto work clothes separately. Remove soiled, soaked clothin immediately. Keep ignition sources away - do not smoke. Protect from heat. Do not store near heat sources.	
7.2 Conditions for safe storage, including any incompatibilities Storage Requirements to be met by storerooms and containers:	Keep container dry and tightly closed. Further information on the storage conditions that must be observed for quality assurance reasons can be found in our technical data sheet. Keep tightly closed in original packaging. Ventilate storage room well. Carefully close opened containers and store upright prevent any leakage.	
Information about storage in one common storage facility: Further information about storage conditions: Storage class 7.3 Specific end use(s)	Storage temperature >5°C and <30°C May be stored together with hazardous substances of othe classes up to 200 kg. Keep container tightly closed in a well-ventilated place. 6.1C No further relevant information available.
