

MC-Cleaner G

System cleaner for MC-Color Proof vision
and MC-Color Flair vision

EXPERTISE
SURFACE PROTECTION

MC-Cleaner G

System-integral cleaning

You may have applied a high-performance surface protection system to protect your structures against dirt and contamination, but there is not much you can do to prevent graffiti. Once vandalised, you'll need an effective cleaner to return your buildings to their original fair-faced state.

This is where MC-Cleaner G comes into its own. The system-integral cleaner for surfaces protected with MC-Color Proof vision or MC-Color Flair vision delivers a thorough yet also environmentally compatible cleaning. Keeping up appearances and retaining the value of your assets.

MC-Cleaner G has been **especially developed for removal of graffiti from externally exposed surfaces**. With this unique, ready-to-use gel, you can effortlessly remove spray and liquid paint, felt pen and car lacquers, as well as many speciality paint products from your walls.

Environmentally sound thanks to gel-like consistency for simple, drip-free application.

- Ready to use
- Non-drip
- Environmentally compatible

Application

Apply MC-Cleaner G in circular motion using a soft-bristled brush of appropriate width to the graffiti or daub. If applying to rough or textured surfaces, use a hard-bristled brush.

Non-drip removal

After just **2 – 3 minutes** (max. 5 minutes) of exposure time, the gel-like paint/cleaner mix is ready to be removed from the substrate using a squeegee. Wipe the mix off the squeegee with a cloth or paper towels. Allow the wipes and mixture to harden in a well ventilated location. Then dispose of as normal construction rubble.

Removal of stain shadows (optional)

If the surface should still show hue distortions after cleaning, simply apply **MC-Reinigungsmittel U** cleaner to the affected areas and wipe with a cloth.

Certified and approved in accordance with
Germany's technical test regulations
for anti-graffiti systems on concrete
(TL/TP AGS-Beton)

Final cleaning

The final cleaning should be carried out with ten-
side-containing (i.e. soapy) water and a sponge.

MC-Cleaner G

- The system cleaner for MC-Color Proof vision/MC-Color Flair vision with integrated easy-to-clean technology
- Thorough cleaning without abrasion, loss of material or colour change
- Ready to use for easy application
- Environmentally sound thanks to gel-like consistency
